Something to consider-images attached

The area is the two townships covering most of the Wilzetta events in Lincoln County (12 miles n-s by 6 miles e-w). The planes shown in the drawing are at sea level, and 5000' increments below sea level. Check marks on the layer means, it is turned on. The disposal and EOR wells include historic, now plugged wells. That can be fixed later to only active ones.

As a reminder, the event locations does not currently show the uncertainty, nor of course do the well locations. Consequently, it can be used to get a feel for the data quality and a subjective overview.

Regards,
Nancy

Thanks Nancy.

I do want to express our thanks in your hard work with Spatial Analyst and the earthquake data. I believe it may turn out to be some of the most important data collect thus far.

We are definitely going to put this software on our wish list.

Thanks Again!
